WIDEX
high definition hearing

Lets users take control of their hearing aid

The new RC4 remote control from Widex is the perfect option for users to make the most of their hearing aid. The RC4 lets users easily and conveniently access hearing aid features such as volume control and listening programs.

For added flexibility, the RC4 remote control can be used with our entire hearing aid range, from CIC to BTE models.

The RC4 is flexible, convenient and above all – discreet.

User satisfaction

Widex' latest digital hearing aids respond automatically to the listening environment, and volume and signal processing are continually optimised without intervention from the user.

They also offer virtually unlimited customisation opportunities for users who are interested in personalised programs that they themselves control.

By allowing them to take control, the RC4 remote control solution offers users complete satisfaction.

Discreet and intuitive user interface

User-friendly functionality is central to the development of all Widex products.

With such a broad choice of options to tailor individual hearing aids to the needs and preferences of the user, it is essential that the remote control is simple to use.

The high-contrast display and optional display light in the RC4 make it easy to see which program or volume setting has been selected. The large keys of the remote control have an intuitive design and are easy to operate – also for those who have reduced finger dexterity.

The RC4 uses radio-frequency transmission so the hearing aid may be operated discreetly from a pocket or a handbag. To ensure against interference from other remote controls, the RC4 is individually matched to the user's Widex hearing aids.

Two models: RC4-1 and RC4-2

To meet the needs of the widest range of users, the RC4 is available in two models. Each model has the unique user-friendly design.

| Feature | RC4-1 | RC4-2 |
|--|------------------|------------------|
| Program selection | Up to 3 programs | Up to 5 programs |
| Volume adjustment | -12 to +6 dB | -12 to +6 dB |
| Mute | • | • |
| Adjustable time-out | • | • |
| Simultaneous adjustment with binaural fittings | • | • |
| Simultaneous or separate adjustment with binaural fittings | | • |
| Event-log function | • | • |
| Alarm function | • | • |
| Zen+ relaxation and tone program* | | • |

RC4-1

The RC4-1 model offers program selection of up to three programs, a start function for the event log, an integrated alarm function, a mute function, and simultaneous adjustment of all features with binaural fittings.
